**Project # 2**

<b>Title</b>	<b>Cost Basis Reporting – Portfolio Evaluation System (PES)</b>
<b>Role</b>	Senior Applications Developer
<b>Company</b>	Inautix Technologies India Pvt. Ltd
<b>Duration</b>	December 2013 - February 2015
<b>Description</b>	<p>Portfolio Evaluation System (PES) is a complete trade date tax lot account and performance measurement system. It is integrated with Pershing's online customer account and bookkeeping systems. This tax lot accounting and performance measurement service allows investment professionals to monitor portfolio's performance in online through Netx360. Cost basis adjustments were made in PES system and the cost information is updated in the Holdings and Disposed lot files to display the data for the end user in Netx360.</p> <p>Key Projects :</p> <ul style="list-style-type: none"><li>➤ Original Issue Discount (OID) for Bonds – 2014 Regulations</li><li>➤ Non-OID for Bonds – 2014 Regulations</li><li>➤ Single Source Realized Gain/Loss Online screens Creation</li><li>➤ Unrealized Gain/Loss Online Screens creation</li><li>➤ Cost Basis Reporting – Tax Lot Supplemental Data Upload</li><li>➤ Cost Basis Non Trade Transaction - Internal Account Swing</li><li>➤ Cost Basis Reporting – PES Capacity improvement process</li></ul>
<b>Responsibilities</b>	<ul style="list-style-type: none"><li>➤ Responsible for requirement analysis by coordinating with business users.</li><li>➤ Worked closely with subject matter experts (SME) in CID and TIPS to design the new process in order to avoid gaps in architecture between the applications</li><li>➤ Developed new modules and testing has been made for this project to ensure proper regression testing has completed to avoid issues.</li><li>➤ Worked with the SAME's in Netx360 front end and middleware services to keep the complete process flow intact</li><li>➤ Production implementation plan has created for this project and the same has been documented.</li><li>➤ Resolution of the defects identified by the business users using Quality Center.</li><li>➤ Tracked the project status throughout its lifecycle and minimize the schedule variance using PPM and SSCB.</li><li>➤ Provided TEST and PRODUCTION region support</li></ul>

**Project # 3**

<b>Title</b>	<b>Corporate Actions</b>
<b>Role</b>	Application Developer / Senior Applications Developer
<b>Company</b>	Inautix Technologies India Pvt. Ltd
<b>Duration</b>	December 2010 - November 2013
<b>Description</b>	<p>The Dividend processing, REOR and Proxy systems in Pershing are handled under Corporate Actions. In dividend system based on the user preference of Reinvestment or cash option, the system calculates the amount of securities to be bought and processes trade to buy those securities. The REOR system takes care of the various corporate actions events like mergers, spin off, stock buyback, name change and bankruptcy etc, and recalculates the amount of shares an investor holds. The PROXY system calculates the number of voting rights a shareholder possesses based on the number of securities an investor holds as well as handles the proxy voting options.</p>
<b>Projects</b>	<ul style="list-style-type: none"><li>➤ Global Margin for REOR – This project deals with enhancing the current REOR application to handled non US dollar (GLOSS) processing. The system now captures both PAR and GLOSS positions and the REOR memo fields are correctly populated. This has paved way for Pershing to handle REOR events for calculating positions in non-USD platform providing enhanced leverage to our end customers and IBDs.</li><li>➤ SWIFT Enhancement - To help the industry deal with the complexity of corporate actions and improve quality of messaging, SWIFT offers the ability for customers to assess compliance with industry defined market practice. This Increase the firm's global institutional business for client's that use Swift messaging as the sole input/output mechanism to process transactions. This has enhanced the capability of Pershing to compete with European providers (e.g. BNP Paribas, Fortis, UBS, etc.) for global institutional business</li><li>➤ MAXX to GMAR in PDVA – Enhance PDVA system to process non US currency providing enhanced leverage to our end customers.</li><li>➤ EBS Implementation – The corporate actions application initially used SUNN system for all their fee processing. Pershing is developing a global billing system called Enterprise Billing System (EBS) to handle all the Pershing fees in one application to generate a consolidated revenue report. The project</li></ul>

	<p>modified the fee processing in all the corporate actions systems to be EBS enabled.</p> <ul style="list-style-type: none"><li>➤ IRS 302 – This regulatory project provides a cost-effective, time-sensitive solution in keeping Pershing compliant within IRS guidelines. The changes have been made in REOR application for withholding taxes from international clients.</li></ul>
<b>Responsibilities</b>	<ul style="list-style-type: none"><li>➤ Develop detailed project plans to help monitor progress toward goals, and provide timely customer updates on progress</li><li>➤ Testing has made for this project and ensured proper regression testing has completed to avoid issues.</li><li>➤ Delivering a product in accordance with the standards set by the company. Such standards include methodology, design, code, test suites, performance and scalability, tool set, detailed component design, unit testing and integration testing of the application.</li><li>➤ Participate in requirements analysis, estimation, design, reviews, system and user acceptance testing, and implementation of the application</li><li>➤ Ensure quality and timely delivery of solutions to meet service level goals for timely responsiveness and problem resolution</li><li>➤ Excellent interpersonal and organizational skills, along with good verbal and written communications skills</li><li>➤ Ability to work across business and system groups at all levels</li><li>➤ Involved in Post implementation support and closed lots of open issues.</li></ul>

**Project # 4**

<b>Title</b>	<b>Rules Engine</b>
<b>Role</b>	Applications Developer
<b>Company</b>	Inautix Technologies India Pvt. Ltd
<b>Duration</b>	June 2010 - November 2010
<b>Description</b>	<p>Rules Engine (RE) is a proprietary powerful tool of Pershing which basically consists of a series of rules for trading. It evaluates the rules against the trade placed by the customers and notifies the potential problems with them. Any trade request, that passes the rules set in RE system by the IBD and Pershing gets automatically approved. The outcome of the rules might result in the below transactions.</p> <ul style="list-style-type: none"><li>→ Not being allowed to be processed (Hard stop. i.e, Severe error)</li><li>→ May require someone to approve the transaction (Mild error)</li><li>→ May result in the display of Warning message (Soft error)</li><li>→ Transaction is good enough to bypass approval (Success)</li></ul> <p>As a part of Citi requirement, a set of six new rules were created to restrict the trade based on the accounts used for trading. The new set of rules were categorized into two groups as follows.</p> <ul style="list-style-type: none"><li>1)RTL (Restricted Trading List) – restrictions are Firm wide and are not applied on an office</li><li>2)RCR (Research Change Restrictions) – Restrictions only apply to Employee or Employee related accounts.</li></ul>
<b>Responsibilities</b>	<ul style="list-style-type: none"><li>➤ Performed impact analysis, construction and quality assurance</li><li>➤ Coordinated and followed-up on the integration testing and target date with other applications that was also impacted.</li><li>➤ Responsible for documentation and Artifact preparation</li><li>➤ Production implementation plan has created for this project and the same has been documented.</li><li>➤ Provided TEST and PRODUCTION region support.</li></ul>
